

KIC TECHNICAL BULLETIN

KIC BRAKE DRUM DESIGN IMPROVEMENTS

As part of our continuous improvement program, we are making some changes to our flagship brake drum, the 60001 series. In addition to profile sculpting, the new improvements include as-cast stud holes and an un-machined squealer band.

These features are made possible by using a high-tolerance casting and will allow KIC to provide a lighter, high performance drum at a competitive price.

KIC will phase in these improvements starting Q2 2008 with direct shipments and warehouse inventory will follow. In order to differentiate the prior versions of drum from the new one, the new part number will be 60001-108. Please contact KIC customer service at 800-488-5422 for more information.

Summary

- KIC improved drum design
- As-cast holes
- Un-machined squealer band
- Part Number revision change
- New PN is 60001-108
